

ABSTRACT OF THE DISCLOSURE

A method of configuring a home entertainment network terminal at a subscriber site, consistent with certain embodiments, involves provisioning a home entertainment network terminal by using DHCP services to obtain a unique terminal identifier. The
5 method further involves carrying out a discovery process by attempting to contact each terminal in the sub-domain within the scope defined by DHCP option; and synchronizing a database with a database of the identified terminal. This abstract is not to be considered limiting, since other embodiments may deviate from the features described in this abstract.
